## PROFESSIONAL SUMMARY

Full-Stack Developer specializing in MERN stack and AI-powered applications, with hands-on experience in authentication, RESTful APIs, real-time systems, cloud deployment, and LLM-based applications. Experienced in building and deploying modern web applications using React.js, Node.js, MongoDB, AWS, and AI frameworks.

## TECHNICAL SKILLS

**Programming:** Java (OOP, DSA), JavaScript (ES6+, Async/Await), TypeScript, SQL (MySQL)  
**MERN Stack:** React.js, Node.js, Express.js, MongoDB, Mongoose, REST APIs, MVC Architecture  
**Frontend:** HTML5, CSS3, Next.js, TypeScript, Tailwind CSS, Bootstrap, React Router, Redux, Thunk, GSAP  
**Authentication & Real-Time:** JWT Authentication, Protected Routes, Socket.io, WebRTC, Nodemailer  
**AI / LLM:** Gemini AI, LangChain, LangGraph, RAG, Tavily, LLM-based Application Development  
**Cloud & Deployment:** AWS S3, AWS EC2, AWS Amplify, Docker, Render, Vercel  
**Tools:** Git, GitHub, Yargs, Postman, VS Code, Cursor AI, Claude AI, Puppeteer

## PROJECTS

### Nova Search GitHub

MERN, Gemini AI, LangChain, LangGraph, RAG, Tavily, Nodemailer

- Built a full-stack AI-powered search application using the MERN stack, Gemini AI, LangChain, and RAG to retrieve relevant information and generate contextual responses.
- Implemented LangGraph-based AI workflows to manage multi-step response generation, evaluation, and reasoning across LLM operations.
- Integrated Tavily for web search and retrieval, maintaining conversational context to provide more relevant responses to user queries.

**Demo:** [nova-search-frontend.onrender.com](https://nova-search-frontend.onrender.com)

### CodeHub – GitHub Clone GitHub

MERN, AWS S3, AWS Amplify, Yargs, Git CLI

- Built a GitHub-inspired platform using the MERN stack with repository management and core Git functionality including init, commit, push, and pull.
- Implemented a command-line workflow using Yargs to execute Git operations and connect local repositories with the application.
- Integrated Amazon S3 for repository data storage and AWS Amplify for frontend deployment and cloud integration.

**Demo:** <https://main.d31x320hv8k13m.amplifyapp.com/>

### React Dooks GitHub

TypeScript, React Architecture, Class Components, JavaScript, CSS

- Built a lightweight React implementation from scratch to understand the core concepts behind component rendering, state management, and UI updates.
- Used TypeScript and class components to implement the framework structure and created an Avengers-themed countdown application on top of the implementation.
- Explored fundamental frontend concepts including component architecture, state updates, event handling, and dynamic rendering through the project.

## ACHIEVEMENTS

- 2nd Prize** – Technical Paper Presentation, Viva Institute of Technology
- 2nd Prize** – Frontend Development Competition, Viva Institute of Technology
- 3rd Prize** – Startup Pitch Challenge, Sheryians Coding School
